The best electric sterilizers for power bottles are generally more expensive but can sterilize more equipment at the same time, have extra features, and donáeT Mt hog up the microwave. The microwave. It connects the UV light sterilizer to produce UV light that kills bacteria just as effectively hot steam. Sterilize only (35 minutes), dry only (30 to 50 minutes) and Auto which dries and then sterilizes (60 minutes). Just pop in 200ml water, all the nipples, lids and bottles and 4 minutes in the microwave and you're done! Much easier than others I used. The Medela quick microwave sterilizer bags are also easy on your wallet and are ideal for moms on the move. What we feel portable. I can't blame this. >>> Click here to check the price on Amazon > Click here to check the price on Amazon
